

Vision

National security through responsible information sharing

Mission

- Advance responsible information sharing to further counterterrorism, homeland security, and cybersecurity missions
- Improve nationwide decision making by transforming from information ownership to stewardship
- Promote partnerships across federal, state, local, and tribal governments, the private sector, and internationally

Mission Objectives

Advance responsible information sharing to further counterterrorism, homeland security, and cybersecurity missions

- Transform the domestic information sharing architecture to better identify and respond to threats
- Build and deliver capabilities to manage, integrate, and make sense of vast stores of information
- Enhance cybersecurity information sharing by extending the use of ISE tools

Improve nationwide decision making by transforming from information ownership to stewardship

- Achieve greater interoperability through standards-based acquisition
- Drive responsible information sharing by interconnecting existing networks and systems with strong identity, access, and discovery capabilities
- Standardize, reuse, and automate information sharing policies and agreements with strong protection of privacy, civil liberties, and civil rights

Promote partnerships across federal, state, local, and tribal governments, the private sector, and internationally

- Build organizational capacity through engagement, coordination, training, and management support
- Encourage cultural change through communities of action
